INTRODUCTION

This booklet is an annual publication which brings together in summary form, conservation practices carried out, participation, information on payments, and related data with respect to the Agricultural Conservation Program. Information with respect to the 1947 program is shown by States. Information by States for earlier years has been published in earlier issues of this series, in "Agricultural Statistics," and in the annual reports of the Chief of the Agricultural Adjustment Agency and the Administrator of the Production and Marketing Administration.

The Statistics included have been collected by County Agricultural Conservation Associations and State PMA Offices. The 1947 program year in each State included the 12-month period beginning January 1, 1947.

Data with respect to participation in the various conservation practices under the 1947 program (Table No. 1) were obtained from applications and performance reports. For a few practices, data with respect to the number of farms and structures, may include some duplications because of consolidations to permit national summarization. No duplication results, however, in the extent of a practice carried out or the credit earned. The amount shown under "Credit Earned" in Table No. 1 was computed by multiplying the total extent of the practice reported, by the rate of payment. The "Average Rate" shown for each State and practice was obtained by dividing the credit earned by the reported extent. The "Portion of State Total" was obtained by dividing this amount by the total of such figures for all practices in the State.
